

Non- Conformance Report

Problem 1:

In my graph, the data/ line graph axis are not well defined such as in the date are not clearly visible.

Severity and impact: This can lead to misleading figures.

How it occurred: Due to the number of data stored in one graph, and my figure size with points (11,6), the line plot is compressed.

How to prevent it from happening again: This is likely to happen as the number of data stored for the daily, weekly and monthly basis and also it is to be noted that this consists of around 20,000 rows and 2 columns.

Plan or time estimate to fix; It took 5 to 10 mins to generate the line graph.

Problem 2: I missed certain quotation marks.

Severity and impact: This will lead to an error in my sql query.

As I was in a hurry to complete the code and sometimes, I made some typo errors.

I will take my time to run the code and correct the mistake on spot.

Plan: It took 1 hour to find the mistake though it was a simple exclamation mark or punctuation.

Problem: 3

I missed a letter in writing my variable name.

Impact: This impacted on indicating the correct query.

I will look for all the code, go by line and cross check before moving to another code.

It took me 1 hour to find it and 1 minute to fix it.
